Lower risk Highest risk

This indicator represents the risk profile shown in the KID.
The risk indicator is based on the assumption that you hold units for 5 years.

Warning: the real risk can be very different if you opt for an exit before this period, and you could get less in return.

Recommended investment horizon

Fund Manager comments

Echiquier Value Euro B turned in a positive monthly performance of 2.39% and of 2.12% year-to-date.

The markets continued to rise in March, giving a strong performance for the first quarter. This was driven mainly by AI and the prospect of monetary easing. The fund underperformed due to its underweighting of sectors benefiting from lower interest rates. Real estate and utilities were among the best performers this month. Against a backdrop of still significant growth and inflation, investor expectations of a rapid and significant fall in interest rates seem optimistic. In our view, this high degree of asymmetry between reality and expectations is favourable to value investing for the rest of the year. In terms of movements, we sold our position in KBC because of its now reasonable valuation. Finally, we introduced EQUASENS (formerly Pharmagest Interactive). This company provides software and hardware solutions for the healthcare sector, particularly pharmacies (with a 40% market share in France) and was available at less than 15x earnings at the time of our purchase.

Fund Managers: Maxime Lefebvre, Romain Ruffenach
