Lower risk Highest risk

This indicator represents the risk profile shown in the KID. The risk indicator is based on the assumption that you hold units for 3 years. Warning: the real risk can be very different if you opt for an exit before this period, and you could get less in return.

Recommended investment horizon

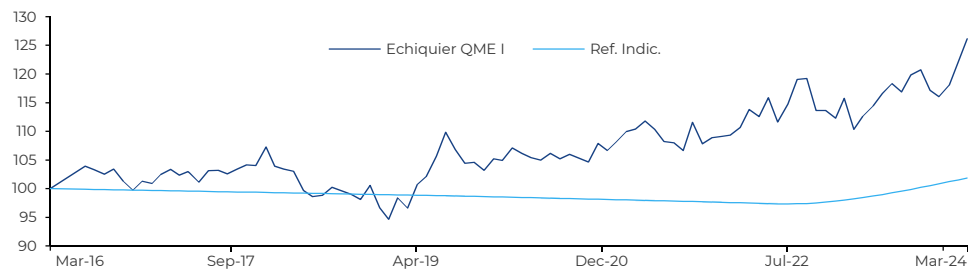

3 years

Fund Manager comments

Echiquier QME ended the month higher, buoyed by continuing favourable trends in equity indices, currencies and commodities. The equities portfolio (+2.3%) continued to benefit from strong trends. Bullish exposure is stable. The average beta is close to 30% and Europe remains overweight. Positions in government bonds (-0.1%) ended close to balance. The model maintains a marginal position in this asset class, due to diverging signals. In currencies (+0.5%), the fund is slightly bullish on the US dollar against the currencies of developed countries. The model also remains a buy on South American currencies (Mexican peso and Brazilian real). Finally, in commodities (+0.5%), the fund benefited from favourable *momentum* in oil products and precious metals. The composite signal remains bullish on energy products, and more marginally on metals.
