Fund Manager comments

Echiquier Value Europe P turned in a positive monthly performance of 1.52% and of 13.92% year-to-date.

In October, the MSCI Europe NR rose by 2.15%, whilst the MSCI Europe Value gained 2.64%. European equity markets benefited from a strong quarterly earnings season and stabilising sovereign bond yields. The portfolio underperformed both its benchmark index and its style index over the month. The month's underperformance relative to the style index was primarily due to allocation: underweight positions in insurance, utilities and consumer discretionary sectors contributed negatively to relative performance. Technology, banking and media made positive contributions. Of particular note were the strong performances of Alten, Dassault Systèmes and UMG following strong quarterly results. During the month, we finalised the exit from DCC, which had reached its target price following the takeover bid for the company. We initiated positions in Zalando and Saint-Gobain, whose valuations we consider to be excessively low.

Risk indicator

Lower risk — Highest risk

Important risk(s) for the fund not taken into account in this indicator: credit risk, guarantees. The risk category associated with this fund is not guaranteed and may change over time.

The synthetic risk indicator shows the level of risk of this product compared with others. It indicates the probability that this product will incur losses in the event of market movements or if we are unable to pay you. We have classified the product in risk class 4 out of 7, which is a low to medium risk class. In other words, the potential losses associated with the future performance of the product are low to medium and, if the situation were to deteriorate on the financial markets, it is unlikely that our ability to pay you would be affected.
This indicator represents the risk profile shown in the KID. The risk indicator assumes that you hold the share for 5 years.
Warning: the real risk may be very different if you opt to exit before that time, and you may get less in return.

Glossary

Lexicon of financial conditions

Swing pricing	Mechanism by which the net asset value is adjusted upwards (or downwards) when the change in liabilities is positive (or negative) in order to reduce the cost of portfolio rebalancing to the holders of the fund as a result of changes in liabilities.

Lexicon of risk indicators

Volatility	Measure of the amplitude of variations in the price of a share, a market or a fund. It is calculated over a given period and is used to assess the regularity of the performance of a share, market or fund.
Sharpe ratio	Indicator of the (marginal) return obtained per unit of risk taken. If the ratio is negative: less profitability than the benchmark. If the ratio is between 0 and 1: outperformance with too much" risk taken.
Bêta	If the ratio is greater than 1: outperformance that does not come at the cost of "too much" risk."Indicator which corresponds to the fund's sensitivity in relation to its benchmark index. For a beta of less than 1, the fund is likely to fall less than its index; if the beta is greater than 1, the fund is likely to fall more than its index.
Information ratio	Synthetic indicator of the effectiveness of the risk/return trade-off. A high indicator means that the fund regularly outperforms its benchmark index.
Tracking error	An indicator that compares the fund's volatility with that of its benchmark index. The higher the tracking error, the further the fund's average performance is from its benchmark index.
Max. drawdown	Max drawdown measures the biggest fall in the value of a portfolio.
Time to recovery (business days)	Recovery time, which corresponds to the time needed for the portfolio to return to its highest level (before the "max drawdown").
Sensitivity	Variation in the value of an asset when another factor varies at the same time. For example, the interest-rate sensitivity of a bond corresponds to the variation in its price caused by a rise or fall in interest rates of one basis point (0.01%).

Lexicon of financial analysis

EV/Sales	Enterprise valuation ratio: enterprise value/sales.
PER	Company valuation ratio: Price Earning Ratio = market capitalisation/net profit.
Consumer discretionary	In contrast to basic consumption, it represents all goods and services considered non-essential.
Basic consumption	As opposed to discretionary consumption, it represents goods and services considered essential.
Communication Services	This sector includes telecoms network operators and providers of communications and data transmission services.
Emerging countries	Emerging countries are countries whose economic situation is in the process of development. This growth is calculated on the basis of GDP, new businesses and infrastructure, and the standard of living and quality of life of the inhabitants.
Commodities	A natural resource used in the production of semi-finished or finished products, or as a source of energy.

Lexicon of credit analysis

Investment grade bond	A bond is said to be "investment grade", i.e. if its financial rating by the rating agencies is higher than BB+.
High yield bond	A high-yield bond is one rated below BBB- by the rating agencies.
Duration	The average life of its cash flows weighted by their present value. All other things being equal, the higher the duration, the greater the risk.
Yield to worst	The worst return a bond can achieve without the issuer defaulting.
Yield (all calls exercised)	The yield on a bond includes any call dates incorporated into the bond. These "call" dates correspond to intermediate maturities which give the possibility of redeeming the bond before its final maturity date.
